

**FIZ1, Transmitter 2, pre-V+F2 Micro Force, and G3 Radio Board**

At Preston Cinema, our products remain serviceable as long as we can source parts and provide reasonable, timely service. As we stopped selling the Analog V+F Micro Force Zoom Control in 1999, we haven't had replacement boards for several years. Critical parts for these units have been obsolete for some time, and suitable replacements simply aren't available. As a result, as of February 19, 2016, we can **no longer service any Analog Micro Force Controls prior to V+F2**. This includes Analog Film Only, 12/24V, and V+F Micro Force Zoom models.

Similarly, there are no replacement boards for the Hand Unit 1, Transmitter 1, MDR1, Transmitter 2 and G3 transceiver boards for MDR-2s. Original parts and equivalents are mostly obsolete and due to our diminishing supply, **the service of these products will be discontinued as of April 1, 2016**.

We apologize for any inconvenience and will continue to service our other discontinued products: Analog V+F2 Micro Force, V+F lens Control single channel motor driver, MDR-2 and Hand Unit 2 (without the transmitter.)

Here is the full list of products that have or are reaching end of life:

- Analog Film Only Micro Force Zoom Controls
- Analog 12/24V Micro Force Zoom Controls
- Analog V+F Micro Force Zoom Controls
- Hand Unit 1
- Transmitter 1
- MDR-1
- Transmitter 2
- G3 boards for MDR2s
- UHF units
- Micro Servo
- Digital Lens Control
- Power Pod
- Heden M26T motor (serviceable by Heden Engineering in Sweden)
